

Thank you for purchasing the green eye alert.

CTA

CTA Termite Alert

The CTA is a sensitive item, think of it like a mouse trap if you impact it hard it will set off. During handling, dropping or impacting the ends could cause the color to start to slip down.

If the color weight is down 1/8" or less this is an acceptable part.

MTA Refill - The CTA is a direct replacement part to be using in the MTA station, once a hit is found treat the area and replace the CTA to continue monitoring for future activity.

Concrete Install - Insert a CTA green eye alert thru concrete as a perimeter monitor by itself. Requires a 5/8" mason bit.

Retro Fit - The CTA green eye alert can be retro fitted into any bait station. Requires an 11/16" spade bit.

Watch videos at our web site for ideas of multiple uses.

To get increase results remember,

- When inserting the CTA green eye alert be aware that the bottom is wax coated and easily damaged.
- Make direct contact with the CTA on the bottom, as termites can not jump to reach the alert.
 - Not all situations will work out the same; using good judgment will result in a positive situation.
