

# Green Eye

## VISUAL TERMITE DETECTION

**Savings:** Decreasing monitoring times will translate into savings. With the increasing costs of today's world, saving money whenever possible is important. Our studies have proved that our alert versus a conventional bait station will save your company tens of thousands of dollars annually. By reducing fleet size, which reduces gas costs, which reduces insurance, your company will see the difference. Also, you will never have another claim for back injuries due to monitoring for termites. If you like what your reading keep going, it gets better.

**Description:** The Green Eye alert is a **gravity** activated alert, that provides a visual alert at the detection of a termite attack. (The green disappears) The alert contains termite's favorite food source, cellulose. The cellulose supports a colored weight that **drops** when termites attack. NO need to open the alert until the visual detection shows termites are attacking.

**Use:** Install the Green Eye Alert around the structure at 10 foot intervals approximately 2 feet out from the perimeter. The white cap gets buried flush to the ground. Our unique design keeps the alert in the ground, it sheds topical chemicals and ground water providing a better alert for the termites to attack. The CTA (the color changing center) can be used by itself thru concrete or to retro fit other bait stations to color changing visual detection.

**Monitoring:** To monitor you simply walk around and look at the top of the alert for a color change. The (green) will disappear showing a termite attack. You're free to setup any monitoring schedule with your customers you would like. Your customers will even call you to let you know they have attacks. Client participation is the best insurance for the home owner. What's important is to sell them the alert, which will get you the job down the road. We recommend an annual out of ground check-up.

**Treatment:** The Green Eye Alert is a green product, your customers will feel better knowing your not over applying chemicals around the perimeter of their home. We recommend with the Green Eye Alert that you watch for a termite attack, then treat with a non-detectable 10 feet on each side of the attacked alert. Replace the CTA and watch for future activity, however treatment options are completely up to you.

**Quality:** The Green Eye Alert is recognized by all leading pest control experts. The Green Eye Alert has been tested in all environments and found that it performs equally in all conditions.

**Advantages:** The Green Eye Alert requires no bending over to monitor. You check the alert by a visual alert on the top of the monitor. This increase the number of units monitored by one technician in a day. Client participation provides peace of mind for the home owner. Once you buy these station they are yours.

**Ordering:** We are a factory direct manufacturer. No distributors means personal sales, cost savings, and direct contact with the product. The Green Eye Alert is made in Indiana, USA and ships directly to your door. You order online via our website and can make payment with our secure checkout on your credit card.
